RE: Goodwill Store
TSC Project #8962.001

Michael,

This letter is a request to be heard at the February 18, 2015 City of West Lafayette Board of Works meeting to hear and approve the variances from the Stormwater Technical Standards for the above referenced project. The variance is as follows:

1. Variance from Table 4.4 of the City of West Lafayette Ordinance requiring a minimum building pad grade with respect to the overflow path elevation. The site is an infill project located in a fully developed area with buildings on both sides of the site. The site is being raised to provide ADA accessibility and to provide as much freeboard from any of the overflow elevations. The overflow difference is obtained except for the rear yard swale along the north line and at an inlet just west of the proposed dock area. These elevations are required to be 2.0 feet while the proposed site only provides 1.30-1.35 feet.

If you have any questions, please contact me to discuss.

Sincerely,

A handwritten signature in black ink that reads 'James E. Pence'.

James E. Pence
Project Designer
